Eco Paper Bags

Pharmacy Dispensary Eco Paper Bags

Our Pharmacy Dispensary Eco paper bags are designed to provide a practical and sustainable packaging solution while reducing environmental impact. Please see the enclosed specifications and the benefits of our Eco bag range.

Eco Bag Specification

- + **Produced from Recycled Paper** - By using recycled paper rather than virgin paper we are reducing the amount of trees cut down for production, promoting the importance of recycling materials.
- + **Unbleached Paper** - Unlike the conventional white counter bags that often use a bleaching process, our brown paper bags use unbleached paper. By cutting out this process we can create a cleaner and more environmentally friendly bag.
- + **We use water based ink** - Which means they don't contain toxic chemicals like plastisol inks and are manufactured using naturally occurring substances which are better for the environment.
- + **Starch based glue** - A natural adhesive to seal the bag at the bottom meaning no harsh chemicals.
- + **Recyclable** - The greatest part is that this can be recycled once again after use, helping to build towards a greener NHS.
